The Real Dandruff Problem

Dandruff Is Not Just Flakes

- Dandruff is a common, harmless scalp condition causing white or yellowish flakes of dead skin to appear in your hair and on your shoulders, often with an itchy scalp. It happens when skin cells shed too quickly, creating noticeable clumps due to oil and debris, and is linked to [seborrheic dermatitis](#), a fungus ([Malassezia](#))
- The scalp that is oily is more prone to dandruff

What people suffer from ?

- Recurrence of dandruff
- Persistent itching & irritation
- Oily scalp imbalance
- Temporary results from regular shampoos

Why Most Anti-Dandruff Products Fail

Why Dandruff Keeps Coming Back

- All products that are for dandruff in the market focus on surface cleansing only
- Depending on short contact time with scalp
- No targeted treatment
- Focus on symptoms not root cause

The SAVI GLORIOUS Concept

A Smarter Way to Treat Dandruff

- New concept and approach to manufacture ampoules for anti-dandruff
- Ampoules deliver concentrated ingredients directly to the scalp
- Pharmaceutical approach, not cosmetic masking.
- EDA registration no. COSMTOL25117257

Savi
Glorious
Hair Treatment

امبولات للقشرة

Why Ampoules? (Key Differentiator)

- Direct scalp application
- Higher concentrations of active ingredients
- Deeper penetration
- Longer contact time
- Targeted treatment, not wash-off

تحتوي على تركيبة فريدة من المواد الفعالة التي
تعمل معًا لتهدئة فروة الرأس، وتقليل الحكة
والقضاء على القشرة،

Unique Multi-Active Formula

Powerful full-featured Formula

- **Betamethasone:** treat the inflammation, redness, and itching associated with severe dandruff and seborrheic dermatitis.
- **Salicylic acid:** powerful **keratolytic agent**, meaning it exfoliates the scalp by dissolving the "glue" that binds dead skin cells, allowing them to shed easily and reducing flakes. It also helps control oil (sebum) and has mild antifungal properties, targeting the yeast (Malassezia) often behind dandruff, creating a cleaner, healthier scalp environment to stop buildup and irritation.
- **Zinc pyrithione:** inhibiting the growth of *Malassezia globosa*, the yeast causing dandruff, and other scalp microbes, reducing flakes, itching, and irritation by disrupting fungal metabolism and increasing copper levels, leading to a healthier scalp environment.
- **Climbazole:** act as a topical antifungal agent, targeting the root cause of dandruff, the *Malassezia* fungus, by inhibiting its growth and preventing flaking, itching, and scalp irritation.
- **Menthol:** for symptomatic relief, offering a strong cooling, tingling sensation that soothes itchy, irritated scalps, reduces inflammation, and provides freshness, while also having mild antifungal/antibacterial effects and improving circulation to support scalp health.
- **Green tea extract:** fights dandruff by using its antioxidant, anti-inflammatory, and antimicrobial properties, it soothe scalp irritation, control the *Malassezia* yeast linked to dandruff, reduce excess oil (sebum), and protect the scalp from environmental damage, creating a healthier base for hair.
- **Vitamin B5:** moisturizing and anti-inflammatory properties.

Effects of sulfur and salicylic acid in a shampoo base in the treatment of dandruff: a double-blind study using corneocyte counts and clinical grading

J J Leyden, K J McGinley, O H Mills, A A Kyriakopoulos, A M Kligman

PMID: 3301220

Abstract

The effectiveness of sulfur 2 percent and salicylic acid 2 percent either alone or in combination in a shampoo base was determined in a double-blind controlled study using two methods of evaluation: clinical assessment of scaling and corneocyte counts (the number of desquamating cells/cm²). Forty-eight subjects (twenty-nine men and nineteen women) with moderate to severe scaling shampooed their hair under supervision twice a week for five weeks, using one of four formulas: sulfur 2 percent plus salicylic acid 2 percent in a shampoo vehicle; sulfur 2 percent in a shampoo vehicle; salicylic acid 2 percent in a shampoo vehicle; or the shampoo vehicle alone. On days 0, 7, 14, 21, 28, and 35 the degree of scaling was assessed, and specimens were taken for corneocyte counts. Significantly greater and earlier reductions in both degree of scaling and corneocyte counts were seen in subjects treated with the formula containing both sulfur 2 percent and salicylic acid 2 percent in the shampoo base compared with the shampoo vehicle.

Enhanced efficacy and sensory properties of an anti-dandruff shampoo containing zinc pyrithione and climbazole

G A Turner¹, J R Matheson, G-Z Li, X-Q Fei, D Zhu, F L Gaines

Affiliations + expand

PMID: 22970742 DOI: [10.1111/ics.12007](#)

Abstract

Dandruff is a common complaint and is suffered by as much as half of the population at some time post puberty. The condition is characterized by the presence of flakes on the scalp and in the hair, and is often accompanied by itch. The most common treatment for dandruff is the use of shampoo formulations that contain fungistatic agents such as zinc pyrithione (ZPT) and octopirox. Whilst most antidandruff shampoos are effective in resolving the symptoms of dandruff these shampoos can often result in hair condition that is less than acceptable to consumers which can lead to a tendency for them to revert to use of a non-antidandruff shampoo. This can result in a rapid return of dandruff symptoms. The aim of this investigation was to study the impact of using a combination of antidandruff actives and silicones on the resolution of dandruff and to deliver superior sensory properties to the hair. We have demonstrated that shampoo containing the dual active system of ZPT/Climbazole deposits both active agents onto a model skin surface (VitroSkin) and reduces *Malassezia furfur* regrowth in vitro. Clinical evaluation of the dual active shampoo demonstrated superior efficacy and retained superiority during a regression phase where all subjects reverted to using a non-antidandruff shampoo. We have also demonstrated that it is possible to deposit silicone materials from antidandruff shampoo uniformly onto both skin and hair. This results in a smoother hair surface that results in improved hair condition.

Understanding the Mechanism of Action of the Anti-Dandruff Agent Zinc Pyrithione against *Malassezia restricta*

Minji Park¹, Yong-Joon Cho², Yang Won Lee^{3,4}, Won Hee Jung⁵

Affiliations + expand

PMID: 30108245 PMCID: [PMC6092343](#) DOI: [10.1038/s41598-018-30588-2](#)

Abstract

Dandruff is known to be associated with *Malassezia restricta*. Zinc pyrithione (ZPT) has been used as an ingredient in anti-dandruff treatments. The mechanism of ZPT has been investigated in several studies; however, a non-pathogenic model yeast, such as *Saccharomyces cerevisiae* was most often used. The aim of the present study was to understand how ZPT inhibits the growth of *M. restricta*. We analyzed the cellular metal content and transcriptome profile of ZPT-treated *M. restricta* cells and found that ZPT treatment dramatically increased cellular zinc levels, along with a small increase in cellular copper levels. Moreover, our transcriptome analysis showed that ZPT inhibits Fe-S cluster synthesis in *M. restricta*. We also observed that ZPT treatment significantly reduced the expression of lipases, whose activities contribute to the survival and virulence of *M. restricta* on human skin. Therefore, the results of our study suggest that at least three inhibitory mechanisms are associated with the action of ZPT against *M. restricta*: (i) an increase in cellular zinc levels, (ii) inhibition of mitochondrial function, and (iii) a decrease in lipase expression.

The Problem (Scalp Reality)
Dandruff is more than just flakes, it is not just a cosmetic issue it is associated with:

- Persistent flakes
- Itching & irritation
- Oily or imbalanced scalp
- Fungal growth
- Recurring dandruff after regular shampoos
- 👉 Using harsh shampoos may remove flakes temporarily, but fails to treat the real cause.

A woman with long, wavy brown hair is shown from the back, holding a white shampoo bottle in her right hand. The background is a plain, light-colored wall.

Why Regular Shampoos Fail ?

- Temporary relief only
- Focus on washing, not treatment
- No control of fungal overgrowth
- No regulation of sebum production
- ✨ Result: dandruff always comes back.

What Makes It Different

Why SAVI GLORIOUS stands out

Multi-active medical-grade formula

Combines exfoliation + antifungal + soothing

Developed for long-term scalp health

Works perfectly as part of a complete routine

Shampoo Alone vs Routine

Best results achieved when combined with:

- **SAVI GLORIOUS Anti-Dandruff Ampoules**

 Shampoo = surface treatment
 Ampoules = deep scalp action

 Faster & longer-lasting dandruff control.
